

# **“THE SEAT LOCKER”**

BY JACOB, MIGLE & FILIPPO

## **WHAT AM I?**

I'm the **seat locker**, my function is to keep your belongings safe and locked. So that your arms, legs and mind can be free from worrying about your bags.

## **FOR WHAT PURPOSE AM I DESIGNED FOR?**

I am designed to securely keep your bags locked away during the trip so you can just sit comfortably instead of keeping any of your belongings on your lap. That way you feel safer, at ease and have a more pleasant experience while traveling via public transport services.

## **WHAT PLACE AM I DESIGNED FOR?**

I am designed for the metro, tram and bus. You will be able to conveniently locate me under your seat. I take up the free space underneath the seats which would otherwise be left unused. So I sit under the seat and keep your bags safe.

## **HOW AM I ACTIVATED?**

You have to use your OV chip card to unlock me and then you can store your belongings inside. No one else can unlock me but you so rest assured only you will have access to your belongings. So even if you forget your bags, they will be there safe with me, until you have access to me again.

## DEVELOPMENT OF OUR IDEA

We collectively decided to continue with our initial gesture, which was “holding on to your bag”. While riding the public transport systems here in Rotterdam, we realized that there are sufficient spaces underneath the seats of the metros and trams. This led us to the idea of creating “seat lockers” which can utilize the available space underneath the seats to store or more appropriately, hold our belongings for us. We designed this hypothetical seat as a way for us to be able to have a more enjoyable and comfortable travel experience while using public transport systems. We firmly believe that by having “seat lockers”, it can give every traveler the peace of mind that their belongings will be safe and relieve any tension that they might feel.
